

UČNI NAČRT PREDMETA / COURSE SYLLABUS						
Predmet:	Odzivi na stres v morskem okolju					
Course title:	Stress Responses in Marine Environment					
Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester			
Ekotehnologije, 3. stopnja Ecotechnologies, 3 rd cycle		1	1			
Vrsta predmeta / Course type	Izbirni / Elective					
Univerzitetna koda predmeta / University course code:	EKO3-761					
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
15	15			15	105	5
<p>*Navedena porazdelitev ur velja, če je vpisanih vsaj 15 študentov. Drugače se obseg izvedbe kontaktnih ur sorazmerno zmanjša in prenese v samostojno delo. / This distribution of hours is valid if at least 15 students are enrolled. Otherwise the contact hours are linearly reduced and transferred to individual work.</p>						
Nosilec predmeta / Lecturer:	Doc. dr. Andreja Ramšak Prof. dr. Alenka Malej Prof. dr. Valentina Turk					
Jeziki / Languages:	Predavanja / Lectures: slovenski/angleški - Slovene/English Vaje / Tutorial: slovenski/angleški - Slovene/English					
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites: Zaključen študij druge stopnje naravoslovne ali tehničke smeri ali zaključen študij drugih smeri z dokazanim poznavanjem osnov področja predmeta (pisna dokazila, pogovor).				Completed second level studies in natural sciences or engineering or completed second level studies in other fields with proven knowledge of fundamentals in the field of this course (certificates, interview).	
Vsebina:	Content (Syllabus outline): Introduction to estuarine and coastal marine ecosystem. Human influences on the coastal zones and resource use, environmental indicators and DPSIR framework. Marine pollution and coastal water quality (sources and impacts of pollution, monitoring). Understanding the ecological stress evoked in marine organisms by different environmental factors and its meaning for individual, population, species level. Introduction to main stress-induced mechanisms at					
Uvod v obalne morske ekosisteme in ekosisteme rečnih izlivov v morje. Vplivi človeka na obalna območja in uporabo virov, okoljski indikatorji in shema DPSIR. Onesnaženje v morskem okolju in kvaliteta obalnih voda (viri in vplivi onesnaženja, monitoring). Poznavanje ekološkega stresa v morskih organizmih, ki ga sprožijo različni okoljski dejavniki, in pomen na nivoju osebka, populacije in vrste. Uvod v glavne mehanizme odziva na stres na celičnem nivoju zaradi abiotiskih stresnih dejavnikov (toplota, mraz, slanost, hipoksija, suša)						

<p>v morskih organizmih (npr. mehkužci in ribe; pomembni v prehrani ljudi).</p> <p>Toksične spojine kot stresni dejavnik in odziv na molekularnem nivoju v morskih organizmih.</p> <p>Genetsko pogojen odgovor na stres (mikroevolucija, odpornost in toleranca na toksične spojine).</p> <p>Terensko delo: zbiranje in beleženje podatkov o fizikalno-kemijskih parametrih, nabiranje primernih organizmov, morfologija in prilagoditve v školjkah kot modelnih organizmih.</p> <p>Vpliv dejavnikov onesnaženja na mikrobeno združbo v obalnih morskih ekosistemih in ekosistemih rečnih izlivov v morje.</p> <p>Proučevanje odzivov mikroorganizmov na različne oblike onesnažil in posledice le-teh na biogeokemične cikle v obalnih morjih.</p>	<p>cellular level due to abiotic stress factors (heat, cold, salinity, hypoxia, drought) in marine organisms (e. g. mollusc and fish; important in human consumption). Toxic substances as stress factors and response at molecular level in marine organisms.</p> <p>Genetically dependent response to stress (microevolution, resistance and tolerance to toxic substances).</p> <p>Field work: Practical work on field to collect and record data on physico-chemical parameters, collection of organisms of interest, morphology and adaptations in mussels as model organism.</p> <p>The impact of pollution on microorganisms from coastal marine and estuarine ecosystems.</p> <p>Understanding the response of marine microbial communities to environmental perturbations, and different contaminants, and consequent impacts on the biogeochemical cycles in the coastal marine environments.</p>

Cilji in kompetence:

Cilj predmeta je pripraviti študenta na raziskovalno delo na področju odziva na stres v morskem okolju.

Kompetene:

Izbira in načrtovanje ustreznih pristopov za reševanje okoljskih problemov v morskem okolju.
Izdelava scenarijev zaradi posledic onesnaževanja za morske organizme, združbe in morsko okolje
Izbira ustreznih metodologij za meritve škodljivih učinkov onesnaženja (stres) na morske organizme in združbe
Razvoj novih tehnik in pristopov za oceno stresa v

Objectives and competences:

The aim of the course is to prepare a student for research work in the field of stress response in the marine environment.

Competences:

Selection and planning appropriate approaches to solving environmental problems in the marine environment.
Creation of scenarios due to the consequences of pollution for marine organisms, communities and the marine environment
Selection of appropriate methodologies to measure

morskem okolju Načrtovanje in usklajevanje timskega dela s strokovnjaki različnih znanstvenih disciplin	the harmful effects of pollution (stress) on marine organisms and communities Development of new techniques and approaches for evaluation the stress in the marine environment Planning and coordinating teamwork with experts from various disciplines
--	---

Predvideni študijski rezultati (izidi):

Razumeti stresni odziv, povzročen s toksičnimi spojinami v morskem okolju.
Razumeti povezavo med mehanizmi stresa na molekularnem nivoju in njihovo povezavo med višjimi organizacijskimi nivoji organizma do populacije.
Razumeti vpliv onesnažil na delovanje specifičnih mikroorganizmov in celotno mikrobno združbo (proučevanja na nivoju združbe in na nivoju celice). Razvoj kritičnega mišljenja in analitskega pristopa za reševanje kompleksnih problemov onesnaženja v morskem okolju (povezovanje znanja iz ustreznih disciplin).

Intended learning outcomes:

Understand stress response caused by toxic substances in the marine environment.
Understand relationship between stress mechanisms at molecular level and its connection with higher organisational level of organism and to population
Understanding the impact of pollution on the function and composition of marine microbial community (investigations on the community and single-cell level).
Development of critical thinking and analytical approach to solve complex problems of pollution in the marine environment.

Metode poučevanja in učenja:

Terensko delo, predavanja, seminar, konzultacije

Learning and teaching methods:

Field work, lectures, seminar, consultation

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
Ustni izpit	50%	Oral exam
Seminar	50%	Seminar
